

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

registered from all causes was 866, including diphtheria, 7; measles, 16; scarlet fever, 7, and whooping cough, 43.

GREAT BRITAIN—England and Wales.—The deaths registered in 33 great towns in England and Wales during the week ended February 11, 1899, correspond to an annual rate of 21.9 a thousand of the aggregate population, which is estimated at 11,404,408. The highest rate was recorded in Preston, viz, 32.4, and the lowest in Burnley, viz, 11.1.

London.—One thousand nine hundred and ninety-one deaths were registered during the week, including measles, 21; scarlet fever, 7; diphtheria, 49; whooping cough, 45; enteric fever, 20, and diarrhea and dysentery, 15. The deaths from all causes correspond to an annual rate of 22.8 a thousand. In greater London 2,556 deaths were registered, corresponding to an annual rate of 20.4 a thousand of the population. In the "outer ring" the deaths include 22 from diphtheria, 9 from measles, 4 from scarlet fever, and 17 from whooping cough.

Ireland.—The average annual death rate represented by the deaths registered during the week ended February 11, 1899, in the 23 principal town districts of Ireland was 27.6 a thousand of the population, which is estimated at 1,012,148. The lowest rate was recorded in Sligo, viz, 0.0, and the highest in Newry, viz, 64.4 a thousand. In Dublin and suburbs 212 deaths were registered, including diphtheria, 1; enteric fever, 4; scarlet fever, 1; influenza, 3, and whooping cough, 2.

Scotland.—The deaths registered in 8 principal towns during the week ended February 11, 1899, correspond to an annual rate of 31.2 a thousand of the population, which is estimated at 1,587,414. The lowest mortality was recorded in Perth, viz, 18.6, and the highest in Paisley, viz, 39.9 a thousand. The aggregate number of deaths registered from all causes was 951, including diphtheria, 9; measles, 22; scarlet fever, 6, and whooping cough, 37.

INDIA—Singapore.—Month of December, 1898. Estimated population, 97,111. Total number of deaths, 718, including cholera, 1; beriberi, 111; smallpox, 13, and 118 from phthisis pulmonalis.

ITALY—Genoa.—Month of December, 1898. Estimated population, 218,209. Total number of deaths, 372, including diphtheria, 3; enteric fever, 7, and 53 from phthisis pulmonalis.

SAN DOMINGO—Puerto Plata.—Three weeks ended February 4, 1899. Estimated population, 5,770. Number of deaths not reported. No contagious diseases.
